PROFESSIONAL EXPERIENCE

Optum (UnitedHealth Group), Software Engineer 2022 – Present | Remote, USA

- Reduced AWS costs by an estimated $200K+ annually by implementing caching for external API calls and AWS Secrets Manager access across backend services.
- Selected as the engineering SME for a cross-team migration, bringing source-system expertise to implement and validate an ETL workflow migrating years of eligibility, activity, and rewards data across thousands of plans and millions of members.
- Implemented an AWS event-driven platform for large-scale member onboarding and eligibility processing, integrating data from multiple healthcare systems and applying complex rules to determine rewards eligibility.
- Restored missing return values in Datadog traces by debugging a custom Rust tracing library and updating the OpenTelemetry collector and its configuration, improving backend troubleshooting.
- Enabled automated test-user creation by implementing a dedicated SQS pipeline that triggers existing registration workflows while isolating test traffic from live events.

Cubic Corporation, Software Engineering Intern 2021 | San Diego, CA (Remote)

- Reduced manual testing effort by 100+ hours per month by designing and implementing a REST API testing harness with simulated data in Postgres.
- Resolved 500+ defects across application code and automated test suites, improving build stability and test reliability.
- Presented internship onboarding improvement recommendations to senior leadership, influencing future improvements to the program.

SKILLS

Languages: Java, Python, Go, Rust
Cloud / Infrastructure: AWS (Lambda, AppSync, S3, SQS, Step Functions, CDK, Glue)
Databases: DynamoDB, Postgres, Redshift
Tools: Datadog, Git, GitHub, GitHub Actions, LaunchDarkly
